

# Hints for JavaScript Navigator Challenge

Hints for Implementing the Challenge:

1. Utilizing `navigator.language`:

- Access this property to retrieve the user's browser language setting.

2. Formatting and storing data in cookies:

- Use the `document.cookie` property to set cookies.
- Ensure cookies have an expiry set for 7 days: `max-age=${60 * 60 * 24 * 7}`.

3. Managing asynchronous operations:

- Implement `getLocalCurrency()` using Promises to handle asynchronous API calls.
- Use `then()` for success and `catch()` for error handling.

4. Using the Date object for local time:

- `new Date().toLocaleTimeString()` can be used to retrieve and format the local time.

Remember to handle errors and exceptions gracefully, providing fallbacks or error messages as needed.
